## NOTE

1. Ripple \& Noise are measured at 20 MHz of bandwidth with ceramic 0.1 uF \& chemi-con KY 47 uF parallel capacitor.

| To Oscilloscope | A 30 cm twisted pair of no. 18 AWG copper wire is connected to a <br> 47 uF and 0.1 uF capacitor of proper polarity and voltage rating. |
| :--- | :--- |
| The oscilloscope probe ground led should connect right to the |  |

Twisted Pair: \# 18AWG-30cm
2. Hold-up Time measured at $90 \%$ Vout.
3. Please check the derating curve for more details.
4. Main Vout $>3 \%$ Load, 12 V (Aux) / 0.3A., 12V (Aux) need 0.1A Minimum Load, Auxiliary voltage output ground 10.2~13.3V
5. Strongly recommend to conduct this test with DC Voltage. If customer wishes to test with AC Voltage,
please disconnect all Y-Capacitors from Arch power supply.

## NOTE

6. Current Share Board (Optional):
(a.)The output voltage difference of each parallel single element should be less than 0.2 V .
(b.)Output power at parallel operation = rated power per unit x number of unit $\times 90 \%$
(c.)Connect in parallel no more than 2 units. Please contact ARCH for advice if more than 2 is needed.
(d.)Minimum Load Should be $15 \%$.

7. CAUTION: Double pole, neutral fusing. Disconnect mains before servicing. (ATTENTION : 2 poles avec fusible sur le neutre. Deconnecter le secteur avant intervention.)

FUNCTION DESCRIPITON of CN1 and CN3 (CN3 without C7 and C8 pin)

| Pin No. | Function | Description |
| :---: | :---: | :--- |
| C1 | -5 VSB | This pin connects to the negative terminal(-V). Return for DC-OK and -RC signal output. |
| C2 | +5 VSB | Stand by voltage output ground 4.2~5.5V, referenced to pin C1(-5VSB). <br> The maximum load current is 1A with Fan, 0.4A without Fan.. |
| C3 | GND | This pin connects to the negative terminal(-V). Return for DC-OK and -RC signal output. |
| C4 | DC OK | DC-OK Signal is a DC output, referenced to pin C3(DC-OK GND). |
| C5 | -RC | This pin connects to the negative terminal(-V). Return for DC-OK and -RC signal output. |
| C6 | +RC | Turns the output on and off by electrical or dry contact between pin C5 (-RC), Short: Power OFF, Open: Power ON. <br> The input voltage must be less than 1V in order to disable VOUT and greater than 3.3V (up to 5V) to enable it. |
| C7 | - S | Negative sensing. The - S signal should be connected to the negative terminal of the load. The $-S$ and +S leads should be <br> twisted in pair to minimize noise pick-up effect. |
| C8 | +S | Positive sensing. The +S signal should be connected to the positive terminal of the load. The +S and -S leads should be <br> twisted in pair to minimize noise pick-up effect. |
